Pakistan's ex-PM Imran Khan shot in leg in assassination attempt

LAHORE – Former Pakistani prime minister Imran Khan was shot in the shin on Thursday when his anti-government protest convoy came under attack in the east of the country in what his aides said was a clear assassination attempt. Shots were fired at Mr Khan and other officials standing on a modified container truck as it slowly drove through a crowd near Gujranwala. “There was a guy who was in front of the container who had this automatic pistol,” said former information minister Fawad Chaudhry, who was standing behind Mr Khan. “He fired a burst. Everyone who was standing in the very front row got hit.” The spokesman for Mr Khan's Pakistan Tehreek-e-Insaf (PTI) party said supporters in the crowd

tried to snatch the gun from the attacker. “In that scuffle, he missed the target. There was so much blood on the container.” Six people on the truck were hit and one supporter was killed, he said. “If the shooter had not been stopped by people there, the entire PTI leadership would have been wiped out.” “It was a clear assassination attempt,” he said, adding that Mr Khan was taken to hospital in Lahore and his condition is stable. TV channels showed footage of a man they said was the suspect, who looked to be in his 20s or 30s. He said in the video that he wanted to kill Mr Khan and had acted alone. “(Mr Khan) was misleading the people and I couldn't bear it.” Pakistan has a history of political violence. Former prime minister

Benazir Bhutto was assassinated in December 2007 in a gun and bomb attack after an election rally in the city of Rawalpindi. In the same city, her father and former prime minister Zulfikar Ali Bhutto was hanged in 1979 after he was deposed by a military coup. Mr Khan, 70, was leading a pro-

test march in Islamabad to demand snap elections. There were hundreds of people in the convoy. He had planned to lead the motorised caravan northwards up the Grand Trunk Road to Islamabad. Prime Minister Shehbaz Sharif condemned the shooting and ordered an immediate investigation. In a tweet, Pakistan's President Arif Alvi called it “a heinous assassination attempt”. A former cricket star, Mr Khan was booted from office in April by a no-confidence vote after defections by some coalition partners, but he retains mass public support. He has repeatedly told supporters he was prepared to die for the country and aides have long warned of threats made on his life. Mr Khan is among a long list of elected Pakistani prime ministers who failed to serve their full terms. None has done so since independence in 1947. REUTERS, AFP

\$100m plan to prepare S'pore for future pandemics

Research programme links up experts, agencies to boost response to outbreaks

Salma Khalik
Senior Health Correspondent

A dedicated research programme launched on Thursday with funding of \$100 million over five years will allow Singapore to pull together pandemic experts from various fields to respond to future infectious disease outbreaks. The Programme for Research in Epidemic Preparedness and Response, or Prepare, will link up experts from various disciplines as well as government agencies to tackle such threats. It will also reach beyond the country's shores to strengthen research partnerships, share information and knowledge, and collaborate with institutes internationally.

Prepare will be led by Professor Wang Linfa from Duke-NUS Medical School, with Professor David Lye from the National Centre for Infectious Diseases (NCID), which is hosting the programme, as his deputy. Health Minister Ong Ye Kung, who officially launched Prepare, which was set up about a year back, said adaptability has been a hallmark of Singapore's response to Covid-19, with scientific evidence and data guiding decisions every step of the way. With the experience of the Covid-19 pandemic, Singapore will further enhance its preparedness against future infectious disease outbreaks, the minister said, and Prepare will be one of the key initiatives.

Although Singapore had been preparing for the next pandemic after the severe acute respiratory syndrome outbreak in 2003, there were still gaps that hindered its performance. Prof Wang said that after Singapore obtained a viral sample from the first Covid-19 patient here, it took three days to get permission to isolate and sequence the virus. This was already fast compared with the amount of time this typically takes, but it nevertheless was a delay. The genomic sequence is needed to create diagnostic tools as well as vaccines. Professor Tan Chorh Chuan, who co-chairs the Prepare steering committee, said: “When we look at a pandemic, we realise we need answers and effective solutions in a very short time.” Prof Tan, who is chief health scientist at the Ministry of Health, said clinicians need guidelines on

how to manage patients. NCID executive director Leo Yee Sin said it was thanks to good, established networking that Singapore was able to link up with the National Institutes of Health in the United States to find out what treatments work. Before that, she said, “we were just using everything”. It took about two years for Covid-19 vaccines to get into arms, by which time the pandemic was into the third or fourth wave. Speed is really critical, said Prof Tan, and that is the most compelling reason for having Prepare. The only way to get that speed is if all the necessary background work is done. This includes legal frameworks, such as how to rapidly share patient data while keeping confidentiality intact, so researchers can work on solutions. It means training up expertise and “keeping them warm”, said Prof Tan, be-

cause the next pandemic might be a decade or more in coming. Meanwhile, there are many “intermediate” things that such upskilling can achieve, such as discoveries that will help in understanding future threats better, he said. This will allow scientists and researchers to “do exciting things” such as creating new drugs or vaccines that could give them international renown. Prof Wang agreed that Prepare is not just about waiting for the next pandemic. Skills developed will also be useful in smaller outbreaks, whether within Singapore or in the region – hence also the need for good networking. He said that internationally, scientists have identified 20 viruses that could potentially jump to humans and cause a pandemic. Singapore does not have the funds to study all of them, but could do in-depth studies into one or two of them, so the information would be there should such a jump occur. Associate Professor Gladys Tan, director of the Biological Defence Programme at DSO National Laboratories, likened Prepare to the military, which keeps up its training so it is always ready for a war that hopefully will never come.

HDB resale prices up in Oct but fewer units sold

Michelle Ng
Housing Correspondent

Prices of Housing Board resale flats climbed for the 28th consecutive month in October, but fewer units changed hands – likely a knee-jerk reaction to the latest round of cooling measures. HDB resale flat prices grew at a slower pace of 0.5 per cent in October, compared with September's 1.3 per cent, according to flash data from real estate portals 99.co and
